

## Asbestos and non-asbestos metal tile information

---

Any Textured Metal Tile (TMT) needs to be identified by date of manufacture to identify whether a test for asbestos is required. Any TMT which can be identified as having been manufactured from 1983 onwards will not contain Asbestos as part of the coating. See the photos below for typical date stamps that were used. If there is no date stamp then documentation will need to be provided to identify the date of manufacture. This documentation can include roofing company invoices and /or warranty documents.
